I thought it would be good to warn you of a HUGE MISTAKE I see so many people making who desire to create a self-sustaining life.

The biggest misconception I see that keeps people from achieving this dream is that they (*mistakenly*) ****THINK**** that living a more self-sustaining life is costly, when in fact the opposite is true.

Let me explain.

In 2022 the cost of food keeps going up, with some items already pushing a 20%+ increase! *That means you get 20% less food for that same dollar!*

Who knows where will it be next year...

And on average it costs a family of 4 \$18,000 (USD) to eat quality organic food from a store like Whole Foods.

But what if you could massively reduce your grocery bill with a low-work permaculture garden like a food forest and home garden?

Your average backyard garden can grow \$9,000+ worth of food!

Or another example - this year, energy costs are projected to increase by 50%, which is the most significant since the 1970s! And this is after DOUBLING last year!

But what if you could save hundreds of dollars on energy costs by cooking for free with the sun in a solar oven and heat your home, or greenhouse, with free natural resources?

These things like a food forest and solar oven are only two of so many cool things that permaculture gives us to create sustainability and self-sufficiency at the home and in our lives.

So most people have it backwards...

By investing your time in creating a self-sustaining life *not only are you REDUCING your monthly expenses, you are protecting yourself from future inflation.*

Can you see that **you are suddenly taking back control of your finances, potentially indefinitely**, by being more self-sustaining?

And I would imagine for most, *that would be a sigh of relief.*

So how do you do this?

So how do you do this?

Well IF you attend today you are going to discover how easy and attainable a self-sustainable life is (even in small spaces), including...

KEY #1) How an average backyard can grow food, raise animals, and create a food forest that yields \$20,000+ in home-grown organic food each year!

KEY #2) The one secret (very few are talking about) to starting a modern backyard homestead that takes less than 15 min a day, and costs almost nothing.

KEY #3) How to easily turn your yard into a no-dig, weed-free garden (in less than a few hours) and turn \$60 in seeds into \$2250 worth of food!

That said, don't miss your web class coming up here shortly - I'll send you one more reminder 15 minutes before and I'll see you there B!

Bret James

PS - I'll be giving away a FREE copy of this essential eBook (\$97 value):

Finding The Perfect Property for the Self-Sustainable Homestead Of Your Dreams:
Avoid \$100,000 (or bigger) mistakes and losing years of wasted time!

To get this ebook simply stay until the end of the class and you will receive an email a few hours after it ends with your download link.

IMPORTANT: Here are YOUR training details:

- **Easily Start Your Backyard Permaculture Homestead Today - Using A (Little-Known) Holistic Method To Achieve Freedom & Self-Sufficiency!**
